Tattoo Aftercare Mini Guide

Warning

Before applying creams, disinfectants or bandages on the affected part wash your hands thoroughly with the Linea Tattoo specific Soap with antibacterial ingredients.

Early hours

The fresh new Tattoo must be covered with a bandage to protect the just-inked part of the skin using the most appropriate way according to the skin type.

After 3/4 hours

Remove the bandage gently and rinse with lukewater and with **Linea Tattoo** specific Soap with antibacterial ingredients, rinse thoroughly and pat the surface dry. Do not rub.

This procedure allows the removal of all the traces of petroleum jelly, colour, blood traces and facilitates pores closure.

When dry, apply a layer of Linea Tattoo Panthenol Cream, Linea Tattoo After.Ink Cream, Linea Tattoo After.Ink Spray or Linea Tattoo Shea Butter After.Care (depending on the treatment opted for) and do not apply any bandages, this will allow the Tattoo to breathe.

Following days

A thin film may form on the tattoo but it is normal, do not worry, do not touch or remove any scabs to avoid ruining the tattoo.

Always clean with Linea Tattoo Panthenol Cream, Linea Tattoo After.Ink Cream, Linea Tattoo After.Ink Spray or Linea Tattoo Shea Butter After.Care (depending on the treatment opted for)

You must apply the cream in the morning, afternoon and evening for at least one week: the tattoo must be kept hydrated, but never wet.

Avoid tight-fitting clothing, wear white clothes made of wool or cotton, do not wear clothes made of synthetic or chemically treated fabric which can lead to eventual infections.

During the 20/30 following days

Keep on applying a specific moisturizing cream like Linea Tattoo Panthenol Cream, Linea Tattoo After.Ink Cream or Linea Tattoo After.Ink Spray, but avoid:

- Saunas / Spa
- Sunbathing (artificial/natural)
- Swimming in the pool / sea / tub / baths.
- Contact with pets.
- · Perfume, Powder, Sand.

Pollution, improper diet, stress can cause decadence of skin health and consequently of the tattoo. In case of itching, do not scratch but gently pat the interested part to activate the blood circulation.

The beauty and lifetime of the tattoos do not depend only from the tattoo artist, but as well as a good aftercare. For any doubt or questions, do not hesitate to contact your tattoo professional artist for specific advice.

Protection from the sun

The fresh new tattoo must not be exposed to the sun for at least 5/7 weeks. After that, when the tattoo can be considered healed, you will still need to protect it by using a very high sunscreen protection such as our **Tattoo Sunscreen Lotion SPF50+**, to be applied more times throughout the day. This will prevent your tattoo from fading in the sun, keeping the colors true for longer and avoid reddening.

Permanent Make Up

Derma-pigmentation, most commonly called permanent make up is a derma-pigmentation technique, similar to Tattoo, done by injecting micro-pigments under the outermost epidermal layer.

Immediately after the procedure it is essential to take all necessary precautions to prevent eventual infections, then apply the **Linea Tattoo After.Care Cream** specific for permanent/semi-permanent make up on the treated area to calm and protect the skin. Apply constantly the treatment for 2/3 times a day for 2/3 weeks until the complete healing. Absolutely avoid: sun exposure (natural or artificial), excessive sweating, exfoliation of the treated area, retinol or anti-aging creams for 10/15 days after the treatment.
